*ONE COMPANY
FOR MANY ROUTES.*

LOGISTICS AND INTERMODAL TRANSPORT - TO THE DESTINATION WITH SEAMLESS PERFORMANCE.

Having grown with substance over the years and now set up for the future, neska provides a wide range of services. No matter which goods are to be transported, a comprehensive network at important node points and fast connections by land and water create an efficient transport chain.

/ NESKA KNOWS WHO.

Locations

Leading the way.

The companies in the neska group use central locations along the Rhine corridor. Consistently high performance: efficient transshipment of containers, bulk goods and general cargo, diverse storage capacities and added-value services such as material processing, order picking and packing.

/ COMPLETE LOGISTICS AS ONE UNIT.

THE NESKA-GROUP SPECIALISTS ON SITE.

LOGISTICS THE DIRECTION FOR ALL ROUTES.

It makes a difference how goods are transported from A to B. It comes down to the linkage and the handling, to the desire for greater efficiency and security, to the knowledge that each cargo has to be handled individually.

/ NESKA KNOWS ALL OF THESE DETAILS.

Global network

Goods on the move.

The global flow of world-wide goods is not only about quantity. Quality aspirations are increasing significantly. A broad performance spectrum is neska's response. Everything here is coordinated from a single source: the transshipment, storage and transport of the diversified of goods. In conjunction with the means of conveyance by truck, rail and ship.

Our locations handle over 6.5 million tons of different products every year. At neska there are no open questions, since our know-how has been developed over decades.

/ WE KNOW WHAT WE ARE TALKING ABOUT.

Paper logistics

More print just in time.

PUNCTUALITY IN FOCUS. Printers, publishers and the packaging industry work in narrow time windows – neska has therefore introduced new quality into paper transport: all logistics services are bundled together to suit the customer. neska transports over a million tons of paper a year – with care. High-performance digital networking creates smooth and efficient production processes for the customer. Whether an individual service or complete handling, the experience of neska employees at locations across Germany (with 100,000 square meters of state-of-the-art warehouse space) has made neska into one of the leading paper logistics companies. We even master the paperwork at customs.

Steel logistics

Beyond transport.

A PARTNER TO INDUSTRY. Full-service logistics for steel and aluminium: whether steel bars, tubes, coils, bars, ingots or scrap, our trimodal transshipment is as sensitive as it is systematic. The technical equipment ensures maximum performance, so stainless steel coils up to 15 tons in weight can be expertly stowed away in containers. Diverse warehouse capacities ensure flexibility. Dry handling facilities protect goods that are sensitive to moisture. The valuable metal receives real added value from neska: professional material testing and the cutting of steel bars and tubes are part of our service portfolio. No matter how heavy or how large the metal to be delivered to its destination, neska delivers just in time – or in other words: fittingly and punctually.

International freight forwarding

The best transport for the cargo.

A SMOOTH CONNECTION. Simply seamless: neska offers the entire logistics chain for container and conventional transport – for world-wide export and import, from loading, pre-transport and customs clearance through to unloading in the destination country.

One of the neska core expertise is Europe-wide, temperature-controlled transport of chemicals, medical equipment and food. Increasingly important is world-wide organisation – cross trades. Here neska is concentrating on managing the flow of goods between the Far East and the Arab region, Germany and South America or Germany and south-east Europe. Our multilingual coordinators organise this as the fixed point of contact for all details from A to Z.

Bulk logistics

Raw materials in any quantity.

INPUT FOR THE ECONOMY. There can be no interruption in the supply of raw materials. Steel mills, foundries, co-generation power stations and the chemical industry rely on neska and its seamless transport from coast to hinterland. It is not by chance that neska leads the way in Europe in the transshipment of ferro-alloys. Quality assurance as a matter of course. The equipment at our locations is comprehensive and ideally suited for all types of bulk goods. Re-fractory products, minerals or alloys are processed on site. Crushing, screening, drying and packing: neska offers the entire service for bulk goods, for each grade in each packaging unit, just as the customers requires. What really counts at neska: technology, location, quality management and specialist staff. A whole load of know-how.

In-house logistics

More performance in stock.

ACCELERATION SPECIALISTS. Individually planned outsourcing can better exploit the resources of a production company. To this end, neska logistics fit seamlessly into the value chain. Logistics concepts jointly developed by neska and its customers that include everything: operations planning, goods receipt, storage management, confectioning, commissioning, packaging and of course the transport. The clear advantage for the customer: greater concentration on core business. Efficiency is simply also a question of logistics.

Storage management

New order for all goods.

WAREHOUSING WITH DIVERSITY. The neska principle: complete service from incoming to outgoing goods. Products of all kinds are stored using sophisticated IT systems and packed as necessary ready for shipment. The up-to-date storage management system adapts to the requirements of our customers: neska organises the storage of a wide range of goods, whether as BigBags, pallets or in bulk. In addition to block, rack or fully-automatic high bay warehouses, neska has all the capacity needed for special goods such as water-polluting substances, recycling material, packaged food, feed, or non-hazardous chemical products. At neska there is a route for everything.

INTERMODAL ONE COMPANY FOR MILLIONS OF CONTAINERS.

It always comes down to the content, especially in the case of containers. We ensure that everything arrives in perfect condition and on time – even with sensitive goods and tight deadlines. Our customers' objectives are also our own.

/ OUR CUSTOMERS' OBJECTIVES ARE ALSO OUR OWN.

Container service

A trouble-free journey.

DIVERSITY IN A BOX. Each container transport has its own special features. That is the reason the black-boxX was developed for careful transport of coking coal. The blue-boxX is used for products that are sensitive to moisture. The loading and unloading process of standard containers also adheres to neska quality: experts perform stuffing and stripping using up-to-date technology. Flammable liquid storage at neska is similarly unproblematic thanks to special warehouses with hazardous goods tanks and safety devices. Everything is done for the container itself: repair, maintenance and conversion – the entire service in dedicated workshops with the most modern equipment. For neska there is always a route.

Shuttle and water taxi

Everything flows.

FASTER BY BARGE. Inland waterways in particular are where neska can demonstrate its networking strength. Here the barges in the timetable are loaded to the best possible capacity. These precisely timed vessels bring empty containers from one depot to another when shipping companies require extensive container capacity at short notice. A "taxi service" for all those who store containers in our terminals. This offers neska customers great flexibility and improvement in their stock management. Here the transport flows, non-stop.

Trimodal container transport

The combination is decisive.

Road, rail and water fit together perfectly: neska uses rail and barge shuttles to connect the western European ports and the northern German seaports with the significant industrial locations in the Rhineland and Ruhr regions. Lorries then take the containers from the network of terminals directly to their destination. At all connections neska standardises the processes and improves delivery reliability. Optimised design of the entire chain also helps protect the environment.

/ GOOD FOR EVERYONE.
